

REHAB AT PROVIDENCE

“We have the technology....”

BRINGING BIONICS TO EVERYDAY PEOPLE

Therapists at Providence Healthcare & Rehabilitation Center now use the AlterG

Bionic Leg to help patients get moving again. It's the first wearable robotic trainer — and it's already making rehab more effective.

BETTER, STRONGER, FASTER

The Bionic Leg is activated when the patient shifts weight to the affected limb. This helps patients break the compensatory cycle and naturally re-learn how to use an injured limb. Our therapists find that the Bionic Leg helps patients stand stronger, walk more confidently, and recover sooner.

TECHNOLOGY + EXPERTISE

Bionics, robotics, and other technologies are impressive, but what really makes the difference is having the right people behind the technology. That's why the Providence-Agility Health partnership is so effective. Our therapists are experts in getting people back to their lives. And the AlterG Bionic Leg is a powerful rehab tool, particularly following:

Stroke | Incomplete Spinal Cord Injury
Traumatic Brain Injury | Multiple Sclerosis
General lower-extremity weakness

If you are interested in getting your patients up and moving — safer and sooner than you thought possible — refer them to Providence Healthcare & Rehabilitation.
